## Innovative Linux solutions for business

Netdigix empowers businesses to leverage Linux and open source by delivering scalable, high-performance server and networking foundations for secure enterprise computing. We provide a wide range of high caliber computing services to integrate, deploy and support Linux in the business environment. Built for reliability, Linux offers comprehensive functionality to power today's networks and meet the ever growing demands of business applications.

### Why choose Linux?

Linux is a feature rich true multi-user operating system platform proven to be effective in server environments, Networking applications, development and desktop operating systems. Linux's unparalleled functionality, security and stability have made it the main alternative to the Microsoft operating system. Not surprisingly businesses, government agencies, schools and a wealth of other institutions are discovering how Linux can greatly improve the reliability of their computing systems as well as save them money on licensing.

### Linux in a Windows world.

Linux can be integrated into existing Windows server and desktop environments as well as interoperate with Windows features such as file sharing, authentication and server based services. Linux also incorporates a complete suit of office and business tools with features similar to Microsoft word, Excel, Power point, Access, Adobe Acrobat and many other well known windows software.

### Linux Distributions

Netdigix supports major Linux distributions:

- Debian
- Redhat Enterprise
- Fedora Core
- Mandrake
- Suse
- Gentoo

### Application Environments

- Servers
- Desktops

- Migrations
- Web hosting
- 24x7 support
- Disaster recovery
- Documentation
- Voice applications
- Networking
- Security & Patching
- Clustering
- Load balancing
- Deployments

## Linux facts and figures

According to recent web statistics the apache web server runs close to 70% of all web servers surveyed. That's approximately 53 million out of the 72.5 million servers surveyed!

- Little or no licensing costs
- Microsoft compatible applications
- Easy to use graphic interfaces
- Feature rich applications
- Lower cost of ownership

Linux is no longer just "that other operating system" but a well refined computing platform that can be tailored to the environment it is put in.
